

# Business Process Stories

Business process stories are an innovative method for representing business processes. Unlike 'traditional' methods, which emphasize formalized, abstract and generalized process representations, process stories capture a diversity of informal knowledge about business processes

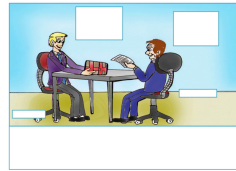

2012-2017: Collaborative tool for business process elicitation

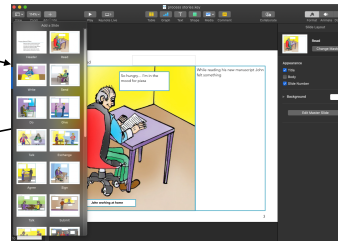

2013-2019: Use of process stories in judicial systems, supporting the parts in a legal process to express their viewpoints using process stories

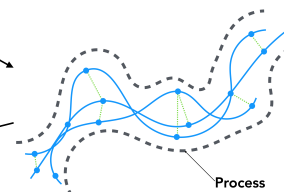

A process story template

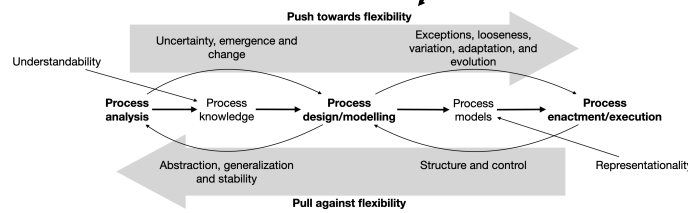

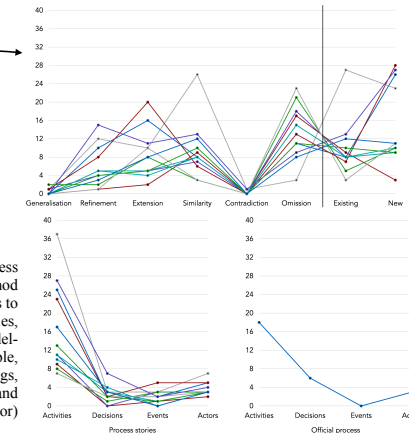

A process story generated using the slide presentation tool and templates

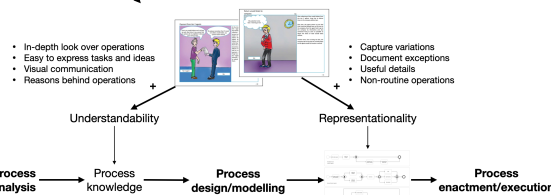

2018: Off-the-shelf slide presentation tool (Microsoft's PowerPoint and Apple's Keynote) supporting the creation of process stories. A set of presentation templates were developed to allow users to create their own process stories

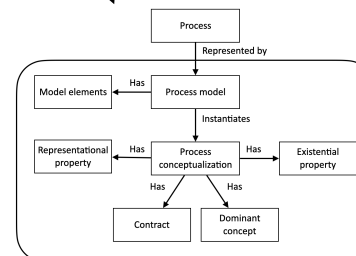

2019: Method for systematic analysis of process stories based on storytelling theory. The method combines quantitative and qualitative techniques to identify particular features of process stories, including activities, actors and decisions (model-based behavior), as well as references to people, emotions, communications, work settings, decisional factors, work methods, locations, and time-related elements (context-based behavior)

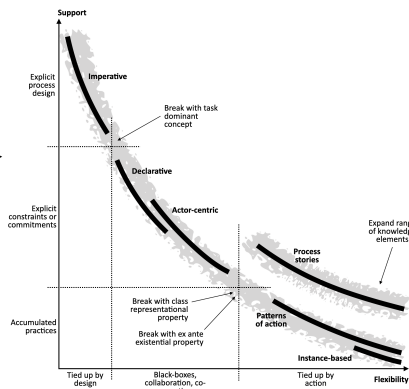

2022: Dynamics of friction in the business process management lifecycle

2022: Study how business process experts could use process stories to realize process flexibility. The study provides insights on the dynamics of friction in the business process management lifecycle

2022: Development of an ontology of business process conceptualization

2022: Comparison chart of business process conceptualizations
